

# Make your own light box

**Step 1.** Get a translucent plastic tub with a secure fitting lid. If the tub has a lid that is not translucent, you can leave it off and turn the tub upside down over the top of the lights. You can use any size tub you like, big or small.

**Step 2.** Place some battery powered LED lights (push lights or fairy lights for a different effect), inside the box and secure the lid.

**Step 3.** Turn off the lights in the room or find a shady spot outside and explore different textures, colours, shadows and materials.

For more information on how you can help our environment, or to make some suggestions of your own, please go to [www.coolaustralia.org](http://www.coolaustralia.org)
