

Station 1: Food Security

- What evidence do we use to illustrate the extent of food insecurity in the world?
- What factors affect food security across the world?
- Does Australia produce enough food to feed its population?
- Our questions.

Station 2: Food Production & Biomes

- How have biomes been changed to produce food?
- What methods are used on farms to increase food production?
- What features of original biomes might remain on today's farms?
- Are farms biomes? This is a challenging question.
- Our questions.

Station 3: Increasing Food Production

- What are the main challenges to increasing food production globally?
- What are the main challenges to increasing food production in Australia?
- Our questions.

Station 4: Population Growth & Food Security

- What are the facts about world population growth?
- What is the link between food security and population growth?
- What are the projected food requirements to feed future populations?
- Our questions.

Station 5: Food Production's Impacts

- What impact do current food production methods have on the environment?
- What is the link between how food is produced and future food security?
- Our questions.

Station 6: Sustainable Food Production

- Should farmers be responsible for retaining components of an original biome and why?
- What role can consumers play in making food production sustainable?
- Our questions.
