

Synthesising a Sustainable Future – Taking Action

In class, we explored **synthesising** by reading texts about recycling and sustainability. We also explored actions that could be taken to make positive change.

Now it is time to act! Using the prompts below plan the action you are going to take:

Select one of the actions/solutions you came up with in the lesson and describe it in writing:

Does this solution require individual action or group action?

What resources will you need?

What steps will you take?

Outline a timeline for your action:

Reflection

Take an opportunity to reflect on the action you took by responding in writing to the prompts below:

What action did you take to make positive change?

What worked well?

What was challenging?

Would you do anything differently?

Are you planning any further action?

Rate your success out of 5 stars, then give a reason for that rating.
