

## Learning intentions:

I will be able to sort recyclables and waste materials into categories.

I will be able to estimate total consumption of each material within the school.

## Success criteria:

I can recall which items can be recycled through our local council (aluminium and tin, paper and cardboard, firm plastics and glass).

I am aware that food scraps can be composted.

I can explain why green waste should be separated from landfill.

I can find the mass of recyclables, green waste, compost and landfill in the classroom.

I can use the data from our class waste to predict totals for the school.
