

Aquaponics Essentials

Use this list to guide you in the design and creation of your own model of an aquaponics system.

To create an effective aquaponics system, you need:

- * A fish tank or pond.
- * An air supply to the fish tank/pond (e.g. an air stone with tube and pump).
- * A growing area.
- * A gravel substance to put into the growing area .
- * Tubing and pumps to transport the water.
