

Aquaponics Essentials

Use this list to guide you in design and creating a model of your own aquaponics system.

To create an effective aquaponics system, you need:

- * A fish tank or pond
- * An air supply to the fish tank/pond
(e.g. an air stone with tube and pump)
- * A growing area
- * A gravel substance to put into the growing area
- * Tubing and pumps to transport the water
