

TYPES OF ANGLES

Classification		Diagram	Description
Angles	Acute		Less than 90°
	Obtuse		Greater than 90° but less than 180°
	Right angle		90°
	Reflex		Greater than 180° but less than 360°
	Revolution		360°
	Straight line		180°

TYPES OF ANGLES

	Complementary		Two angles whose sum gives 90°
	Supplementary		Two angles whose sum gives 180°
Angles when two straight lines are crossed by a transversal	Corresponding		Two angles that are on the same side as the transversal and both are above or below the parallel lines
	Alternate		Two angles that are on different sides of the transversal and both are between the parallel lines
	Co-interior		Two angles that are on the same side as the transversal and both are between the parallel lines
